Once you entered the first formula in each row, use the "Fill Handle" to copy it accross and save yourself a lot of retyping.

Note that this should be just **ONE** figure for the week (i.e the amount of revenue the hotel earns on average by being open. To find it you divide the total revenue for the week by the number of days in the week.

For this formula, you could add the vertical column, you caould ad dthe horizontal row, or you could add ALL of the original data.

All should give the same answer.
